

The Weather and Traffic information offered on XM radio is invaluable for me as a frequent traveler and also part of XM radio's first amendment right to broadcast this information. This is a weak attempt by traditional broadcasters to stifle the first real competition that they've encountered since the advent of television. Please don't let the National Association of Broadcasters and their powerful lobbyist stifle the new competition. Maybe if they'd concentrate on improving their content instead of these mad dog attack tactics they wouldn't have a reason to be fearful of the new media format. Please do the right thing and reject the NAB's petition # 04-160.
Sincerely,

Jarrad Glover
